## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-13 are drawn to a method of detecting the presence of an immobilized molecular analyte, classified in class 435, subclass 174.
  - II. Claims 14-26 are drawn to an apparatus comprising a molecular analyte layer and a film layer, classified in class 435, subclass 287.9.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the method of detection as claimed can be practiced by using another materially different apparatus such as a high throughput screening system to detect the presence of an immobilized molecular analyte, thus the inventions are distinct.

Searching the inventions of Groups I and II together would impose serious search burden. The inventions of Groups I and II have acquired a separate status in the art as shown by their different classifications. Moreover, in the instant case, the search for the method of detection and an apparatus comprising a molecular analyte layer and a film layer are not coextensive. The search for group I would require a text search drawn to the method of detecting the presence of an immobilized analyte and the prior

art which teaches that method would not necessarily be applicable to a teaching of an apparatus comprising a molecular analyte layer and a film layer. Moreover, even if the apparatus were known, the method of detection may be novel and unobvious in view of the preamble or active steps.

3. Because these inventions are distinct for the reasons given above; have acquired a separate status in the art as shown by their different classification; and have divergent subject matter, the search required for Group I is not required for Group II, thus restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
